

EDGE

Industrialisation of high performance special tools in one week

BUDGET

€951K

GRANTS OBTAINED

€490K

ITC FUNDING

2011 - 2012

THE PROJECT

The main objective is to be able to manufacture high performance cutting tools within one week.

To achieve this, it is necessary to set up a complete digital chain for the production process. This chain extends from the geometric design of the tools as per the customer's requirements through the generation of trajectories on multi-axis grinding machines to production and includes control at every stage.
